OAKLY PARK

Name: OAKLY PARK

District: Shropshire (Unitary Authority)

Parish: Bromfield

label.localisation: Latitude: 52.382463
Longitude: -2.7659538
National Grid Reference: SO4796276324
[Map: Download a full scale map \(PDF\)](#)

label.overview: Heritage Category: Park and Garden
Grade: II*
List Entry Number: 1001131
Date first listed: 01-Dec-1986

Details

Gardens of 1820s, and pleasure grounds and park improved c 1780 by William Emes, associated with a country house.

HISTORIC DEVELOPMENT

Until the Dissolution Bromfield was a Benedictine priory. In 1541 the manors of Great and Little Bromfield, and Oakly Park, were leased to Charles Foxe (d 1590), who converted the chancel of the priory's church and its conventual buildings into a house. He acquired the Bromfield freehold in 1563-4 and that of the park some time later. Foxe's daughter took both Bromfield and Oakly Park in marriage to Matthew Herbert. His grandson, Richard Herbert, restored the chancel to the church and made the park's lodge, rebuilt by the Crown in 1552-3, his main residence. Richard's grandson Henry Arthur Herbert was created Lord Herbert of Chirbury in 1743 and after marrying Barbara Herbert, niece of the last Marquess of Powis, inherited Powis Castle and in 1748 was made Earl of Powis. Oakly, for which he now had no need, was sold in the 1760s to Lord Clive on his second return from India. In 1772 Lancelot Brown, who was already working for Clive at Claremont (Surrey, qv), visited him at Oakly, but perhaps for reasons of economy it was William Emes (d 1803) who by the time of Clive's suicide in 1774 was 'directing, planning, and laying out' there (Stamper 1996, 54), as well as at Clive's other Shropshire estate, Walcot (qv). Clive's widow lived on at Oakly until her death in 1817, when it passed to her grandson Robert Henry Clive who brought in C R Cockerell to remodel the house and lay out a formal terrace garden to its east. After R H Clive's death in 1854 the house was used for almost a century as a dower house and there were few changes during that time. In the later C20 there was a good deal of internal restoration work and re-ordering. Oakly Park remains (1998) in private hands.

DESCRIPTION

LOCATION, AREA, BOUNDARIES, LANDFORM, SETTING Oakly Park lies c 3km north-west of Ludlow, south of the village of Bromfield on the main A49 Ludlow to Shrewsbury road. The park lies on ground rising from the River Teme, which forms its northern boundary. South of the park the ground continues to rise, to the wooded slopes of Lower Whitcliffe and Bringewood c 2km to the south which form the main feature of the view south across the parkland. The area here registered is c 160ha.

ENTRANCES AND APPROACHES Oakly Park is approached from Bromfield, via an estate road to the simple, classical, Bromfield Lodge (listed grade II) by C R Cockerell of 1826-7. This has railings and a gate (also listed grade II) to either side. The gate to the east stands at the head of a 500m long drive which passes along the edge of the woods above the River Teme

Inventory of Gardens and Designed Landscapes of England
Inventory of Great Britain
OAKLY PARK

before arriving at the gravelled forecourt on the west side of the house. The west gate serves the main estate road through the park. At the south end of that road, 300m north of Priors Halton, is a back lodge.

PRINCIPAL BUILDING Oakly Park house (listed grade II*) probably originated as the hunting lodge rebuilt in 1552-3. That house, on a bluff above the River Teme, was rebuilt in the early C18 and subsequently altered by William Baker (d 1771) in 1748-58, by John Hiram Haycock (d 1830) in the 1780s and again by C R Cockerell (d 1863) in 1820. The entrance side is on the west, and here Cockerell added a one-storey screen with two symmetrical porches in antis. To the south Cockerell added a flat, one-storeyed attached portico of pilasters with a heavy balcony above. A conservatory or orangery to the east designed by Cockerell in 1824 was largely demolished in the 1930s.

The brick stables (listed grade II) 200m south-east of the house were built in the 1780s by J H Haycock. They were later converted for use as a separate family house.

GARDENS AND PLEASURE GROUNDS To the west of the house, overlooking rising parkland, is the gravelled forecourt. South of the house, and extending for c 150m, is a lawn with a small number of mature specimen trees. To the east of the house is the East Parterre and Orangery Colonnade (elements listed grade II). The Parterre, c 30m square, is gained via steps down from the gravel terrace along the east side of the house. It has a central, cast-iron fountain (in 1838 scoffed at for being painted to resemble marble), surrounded by petal-shaped, box-edged beds ('The Coffins'). Along the east edge of the Parterre is a balustrade with cast-iron balusters (again presumably marbled originally) and a stone rail. The Colonnade, along the north side of the Parterre, comprises copies (with one original) of the main piers of a greenhouse (the curved iron roof of which was made by Jones & Clark of Birmingham) which stood here until demolished in the 1930s. This, and the other architectural features of the East Parterre, were designed in 1824 by Cockerell. The Coffin beds, too, may be of c 1824; certainly they were present by c 1850 (CL 1956, 382). From the Parterre there is a striking, tree-framed view to Titterstone Clee Hill 12km to the east.

A gravel path runs beneath the east balustrade of the East Parterre, leading north to a gate which gives access to the walks on the slope leading down to the River Teme. To the south the path drops into the Rockery, a roughly circular quarry garden probably of a similar date to the East Parterre, and certainly present by 1838 when it was praised by a correspondent to the *Gardener's Magazine*. On the north side of the Rockery is a collapsed grotto, said in 1838 to have been made by Lady Harriet Clive. Rising on the west side of the Rockery is a slightly raised shrubbery, also noted in 1838. A path leaves the east side of the Rockery via a megalithic, pedimented doorway.

The pleasure grounds include two substantial areas of ornamental woodland with walks. One takes in the land sloping down to the River Teme, at its steepest below the house, between Bromfield Bridge and the kitchen garden. About 1791 a bridge was built across the river, to serve the pleasure grounds. It is unclear whether this occupied the same site as the present footbridge, 350m north-west of the house. As well as mature coniferous and other specimen trees there are a few ancient oaks, notably near the stables. One at least, on the west side of the stables, is a survivor of the Druid Oaks, the veteran trees commented on and photographed (Stamper 1996, 84) at Oakly in the C19. In the late C19 there was a maze c 200m south-east of the bridge; this no longer survives. The second area of ornamental woodland is Brick Kiln Covert, otherwise known as The Pinetum, which extends around and south-east of a pool 150m south of the stables first mapped in the 1770s. Much of Emes' energies during the period 1774-81 when he was employed at Oakly were concentrated on its 'pleasure grounds'; the distribution of mature specimen trees suggests these included the woodlands as well as the immediate surrounds of the house. Estate accounts show that during Emes' employ trees were planted and flowering shrubs purchased from the Birmingham nurserymen Brunton & Co (by 1789 Brunton & Forbes & Hunter). South of the house Emes may have laid out a flower garden; the 1838 correspondent noted the 'variously shaped beds, filled with showy flowers'. These beds no longer survive.

PARK As the park is approached across Bromfield Bridge there is a view of Bromfield church (the Foxes' old house), the river, the ornamental woodland on the south bank of the Teme, and Bromfield Mill, a substantial and scenic stone and brick complex (listed grade II) whose restoration was anticipated in 1998. The main road south-east through the park from the Bromfield Lodge was lined with an avenue by 1733; veteran oaks 250m south-east of the Lodge may be survivors of this original planting. Long sections of the avenue in the middle of the park were replanted in the late C19. Some 400m south of Pheasantry Covert (present by 1770s) an estate road (tree lined in 1770s but not now) leads to the eastern end of Duchess Walk, a straight, 1km

Inventory of Gardens and Designed Landscapes of England
Inventory of Great Britain
OAKLY PARK

long avenue along the south-west boundary of the park established in the mid C18 and replanted with oaks in the late C19. Hospital Coppice, possibly so-named after one element of a Second World War camp in the park, on the north side of Duchess Walk, was present by the 1770s. The central and western parts of the park are divided into arable fields; within these and in their boundaries there are only a very few parkland trees.

The south bank of the Teme west of Bromfield Bridge is also wooded, including High Trees on the west edge of the park where trees and shrubs were being planted in the early 1780s. Near Cricket Pool (Cricket's Pool in 1733), and presumably filled from it, is an icehouse, now blocked.

In the Middle Ages the park was part of the chase attached to Ludlow Castle. Some reorganisation of boundaries may have taken place in the late C15 as in 1490 Richard Sherman was appointed Keeper of the 'New Park' of Oakly (Faraday 1991, 30). In 1552-3 the Crown pulled down the old hunting lodge in the park and replaced it with a substantial glazed and tiled lodge which absorbed 220 loads of timber and 160 of stone. In 1617 Sir Charles Foxe kept 'more sheep and cattle than deer' in the park (Stamper 1996, 7). In the later C17 or early C18 the park was provided with avenues. In 1733 there were two, one flanking the main road south-east through the park and the other (no longer extant) parallel with it, 500m long, and ending at Park Pool (at the eastern tip of the registered area). By the 1770s when a second estate map was drawn there were about eight avenues, including a *patte d'oie* radiating south from the house. Between the two dates the park was also enlarged to the south and west, from 143ha in 1733, taking in closes and strip fields north of Priors Halton and Lady Halton, while Rocque's county map of 1752 (unlike any other) shows the park embracing Yeld Bank and other land north of the Teme. By the time the second estate map was produced it had apparently been decided to landscape the park, which Clive's friend Professor John Mainwaring reckoned 'rude and savage' (Stroud 1975, 172). Lancelot Brown (d 1783) visited Lord Clive at Oakly in 1772, but in the event it was William Emes who was employed as improver; he began work several months before Clive's death in 1774. An unusual item for which Emes was paid, in 1774, was bringing sheep from Leicester.

KITCHEN GARDEN The brick-walled kitchen garden lies in the north-east corner of the park, 400m east of the house on relatively low and frost-prone ground on the south bank of the River Teme. The main brick-walled compartment is believed to have been constructed c 1820, and occupies what in the 1770s was a paddock outside the east boundary of the park. It seems therefore to have been among the improvements at Oakly which followed R H Clive's inheritance. The main compartment is rectangular and measures 160m long from east to west and 80m wide. The walls are c 6m tall, and have protruding slate hood-moulds along their tops. Nailed to the south wall are several lead fruit labels of the 1840s. Against the west half of the north wall, which was heated, are a lean-to vinery and fig house, both probably built c 1900 but re-using older wooden superstructures. Nearby to the east is a free-standing mist house. In the centre of the garden is a small, circular pool. The garden remains in production, for fruit, flowers and vegetables.

Abutting the north-east corner of the garden is a substantial brick gardener's house of c 1820 with later additions. Extending west from this, along the back of the north wall, is a range of brick sheds including fruit and root stores, boiler room, and gardeners' privy. To the south of the main compartment is another, c 100m square. This is now an orchard with rough grazing; historically the area was known as the Melon Ground.

Adjoining the west side of the main compartment is a hard tennis court, swimming pool and associated facilities, built in the 1960s.
